Console & Table Applications

The Bolt Through Monitor Arm System is a simple and effective solution for all of your Base Console and shared table monitors. Add a monitor to a conference or team table or scale Base up or down depending on your needs.

Display Options

The bolt through array system can be stacked to provide dual tier monitor configurations and can hold a wide variety of monitor sizes and orientations. Each system includes cable management to keep power and video cables tidy.

Agility in Design

Watson monitor arms can be matched with a variety of configurations, including large format monitors up to 55". Choose the configuration that fits your team and our designers will match the system to the design.

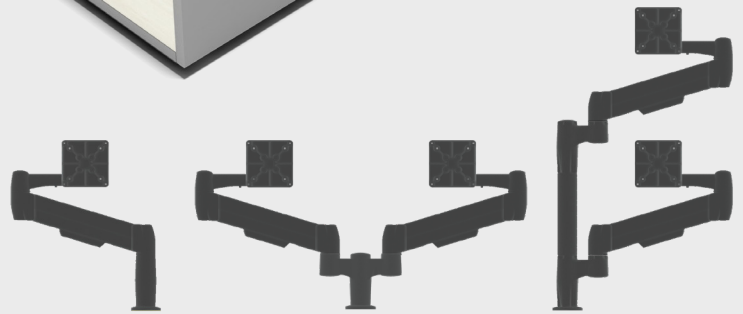

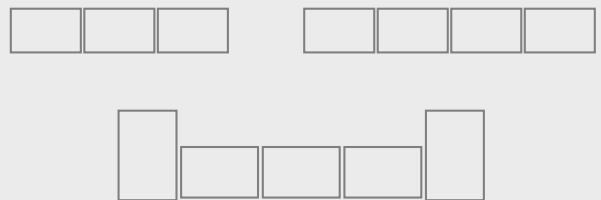

Table Monitors

Use bolt through monitor systems to add monitors to shared resources. Team tables, conference tables, meeting tables. The flexibility of the bolt through system allows for multiple sizes and adjustability.

Additional arm and screen configurations available
